Hyara Generator for Yara rules

선린인터넷고등학교 이현

INDEX

- **1** 제작배경
- 2 Yara의 정의 및 활용성
- 3 제작 도구 소개 및 타 도구와의 차별성
- 4 활용 사례
- 5 결론

제작배경

제작배경

- 작년 비오비 수업시간에 Yara rule과 IDAPython을 배움 다른 IDA Plugin들을 보면서 나도 한 번 만들고 싶어짐
- Yara rule을 제작할 때 유니크한 스트링이 수백 개가 존재 할 경우 rule 제작에 번거로움이 존재함
- 타 도구를 사용해본 결과, 유의미한 rule을 제작해주지 못함 분석가 입장에서 분석한 데이터를 기반으로 쉽게 제작하기 위한 도구 제작
- IDA 플러그인 형식으로 제작된 Yara 도구가 많지 않음

Yara 소개

- 구글이 인수한 virustotal에서 만든 유사도 탐지 도구
- Strings에서 제작한 rule을 기반으로 condition에서 bool형으로 True 또는 False 반환

```
rule silent_banker : banker
    meta:
         description = "This is just an example"
         thread_level = 3
         in_the_wild = true
    strings:
         a = \{6A \ 40 \ 68 \ 00 \ 30 \ 00 \ 00 \ 6A \ 14 \ 8D \ 91\}
         b = \{8D \ 4D \ BO \ 2B \ C1 \ 83 \ CO \ 27 \ 99 \ 6A \ 4E \ 59 \ F7 \ F9\}
         $c = "UVODFRYSIHLNWPEJXQZAKCBGMT"
    condition:
         $a or $b or $c
```

Yara 소개

- 구글이 인수한 virustotal에서 만든 유사도 탐지 도구
- Strings에서 제작한 rule을 기반으로 condition에서 bool형으로 True 또는 False 반환

rule에 대하여 설명하기 위한 정보

```
rule silent_banker : banker
    meta:
         description = "This is just an example"
         thread_level = 3
         in_the_wild = true
    strings:
         a = \{6A \ 40 \ 68 \ 00 \ 30 \ 00 \ 00 \ 6A \ 14 \ 8D \ 91\}
         b = \{8D \ 4D \ BO \ 2B \ C1 \ 83 \ CO \ 27 \ 99 \ 6A \ 4E \ 59 \ F7 \ F9\}
         $c = "UVODFRYSIHLNWPEJXQZAKCBGMT"
    condition:
         $a or $b or $c
```

Yara 소개

- 구글이 인수한 virustotal에서 만든 유사도 탐지 도구
- Strings에서 제작한 rule을 기반으로 condition에서 bool형으로 True 또는 False 반환

```
rule silent_banker : banker
    meta:
         description = "This is just an example"
         thread_level = 3
         in_the_wild = true
    strings:
         a = \{6A \ 40 \ 68 \ 00 \ 30 \ 00 \ 00 \ 6A \ 14 \ 8D \ 91\}
         b = \{8D \ 4D \ BO \ 2B \ C1 \ 83 \ CO \ 27 \ 99 \ 6A \ 4E \ 59 \ F7 \ F9\}
         $c = "UVODFRYSIHLNWPEJXQZAKCBGMT"
    condition:
         $a or $b or $c
```

rule에서 탐지 할 데이터를 저장

Yara 소개

- 구글이 인수한 virustotal에서 만든 유사도 탐지 도구
- Strings에서 제작한 rule을 기반으로 condition에서 bool형으로 True 또는 False 반환

```
rule silent_banker : banker
    meta:
         description = "This is just an example"
         thread_level = 3
         in_the_wild = true
    strings:
         a = \{6A \ 40 \ 68 \ 00 \ 30 \ 00 \ 00 \ 6A \ 14 \ 8D \ 91\}
         b = \{8D \ 4D \ BO \ 2B \ C1 \ 83 \ CO \ 27 \ 99 \ 6A \ 4E \ 59 \ F7 \ F9\}
         $c = "UVODFRYSIHLNWPEJXQZAKCBGMT"
    condition:
         $a or $b or $c
```

데이터를 어떠한 조건 으로 탐지할지 지정

Yara 세부 option

Rule 옵션	설명
wide	한 글자를 2바이트로 읽는 문자열을 검색할 때 사용
ascii	UTF-16이 포함된 문자열이 있는 경우 해당 옵션을 사용
nocase	대소문자 구분 없이 탐지를 허용
fullword	탐지하려는 문자열 사이에 이상한 문자열이 포함되어 있는 경우 탐지 X

Ex) \$a = "test" nocase ascii wide (대소문자 구분 X, utf-16 문자열 탐지, 2바이트 문자열 탐지)

바이너리는 동일한 기능을 하더라도 다른 어셈 코드를 사용 할 가능성이 있음 와일드 카드 기능을 이용하여 rule의 탐지 범위를 넓이는 작업을 해야 좋은 rule이 될 수 있음

Ex) push eax = 0x50, push edx = 0x52 push ebx = 0x53 -> \$a = { 5? } (push eax, edx, ebx 모두 탐지 가능)

Yara For Loop 기능

```
mov
                         [ebp+var 8], ecx
                 mov
                         [ebp+var_4], eax
                 mov
                         [ebp+arg_4], 20h
                 mov
loc 40141E:
                 push
                call
                         AddAtomW
                 call
                call
                         GetTickCount
                 mov
                 mov
                 shr
                         ecx, [ebp+var_4]
                 add
                shl
                         eax, [ebp+var_8]
                 add
                 xor
                         eax, [esi+edi]
                 lea
                 xor
                 sub
                 mov
                 mov
                 shr
                 add
                         ecx, [ebp+var_C]
                shl
                         eax, [ebp+var_10]
                 add
                 xor
                 lea
                         eax, [esi+ebx]
                 xor
                 lea
```

```
v7 = *a2;
v2 = a1[1];
v8 = a2[1];
v3 = *a1;
v4 = 0xC6EF3720;
v9 = a2[2];

결론

결론

소제목

- 제작한 도구를 이용하여 Yara rule을 간편하고 빠르게 제작할 수 있음
- IDAPython은 참고 문서가 많이 없었지만, 끝내 도구를 완성할 수 있었음
- 와일드 카드 처리에 대한 추가적인 연구가 필요하다고 느꼈음

THANK YOU
